YES - We can make your home energy efficient!

Problems

- High energy bills
- Frozen pipes
- Cold or hot rooms
- Drafty, uncomfortable areas
- High or low humidity
- Roof ice, attic condensation
- Unexplained dust
- Mold and mildew
- Rodents and insect infestation

Results

- A home that is energy efficient
- Comfortable and cozy
- Draft free
- Healthy and safe
- Environmentally friendly

"I am so pleased with the air sealing and cellulose insulation that Green Star put in my home. Although only a few months have passed, I've already seen a 25% decline in heating costs and nearly 35% decrease in electrical usage for air conditioning. With recent rate increases, this work will pay for itself in no time." Julie Marin, Rye, NY

Solutions

Home Performance Program

Energy Audit

Fully evaluate your home with the latest equipment and diagnostic tools and prepare a comprehensive report identifying all of the home's energy issues. A detailed quote is then provided for the services available from Green Star.

Air Sealing

Most homes are extremely leaky and have the equivalent of a continually open door allowing outside air into the house. Expert blower-door-assisted air sealing of your house, ductwork, windows and exterior doors is the best first step in an energy improvement program.

Insulation

Installing or supplementing the insulation in your home is the most cost effective way to make your home energy efficient and more comfortable. Premium cellulose insulation is fire rated, mold proof, insect and rodent resistant and is a 100% GREEN product.
